

2. Literature Review

Feedback & Evaluation

The project is evaluated by the course instructor based on the completeness of the system design, implementation quality, and alignment with the required graduation project standards. Feedback is used to improve both technical and documentation aspects of the system.

Suggested Improvements

The system can be further enhanced by:

- Adding advanced search and recommendation features for properties.
- Improving UI/UX design for better user experience.
- Integrating map-based property visualization.
- Adding real-time notifications for visit requests and approvals.
- Expanding the system to include chat between users and property owners.

Final Grading Criteria

The project grade is typically based on the following components:

- **Documentation:** Quality and completeness of all project documentation.
- **Implementation:** Correctness, functionality, and structure of the system.
- **Testing:** Effectiveness of testing and bug handling.
- **Presentation:** Clarity and professionalism of final project presentation.
