Project Overview

Research Question

- How can a centralized real estate platform improve the efficiency of property listing, searching, and management?

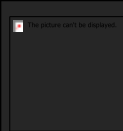

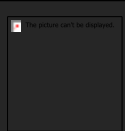

Problem Statements

- Finding suitable properties is often time-consuming.
- Property information is scattered across multiple sources.
- There is a need for a centralized and user-friendly real estate platform.

Objectives

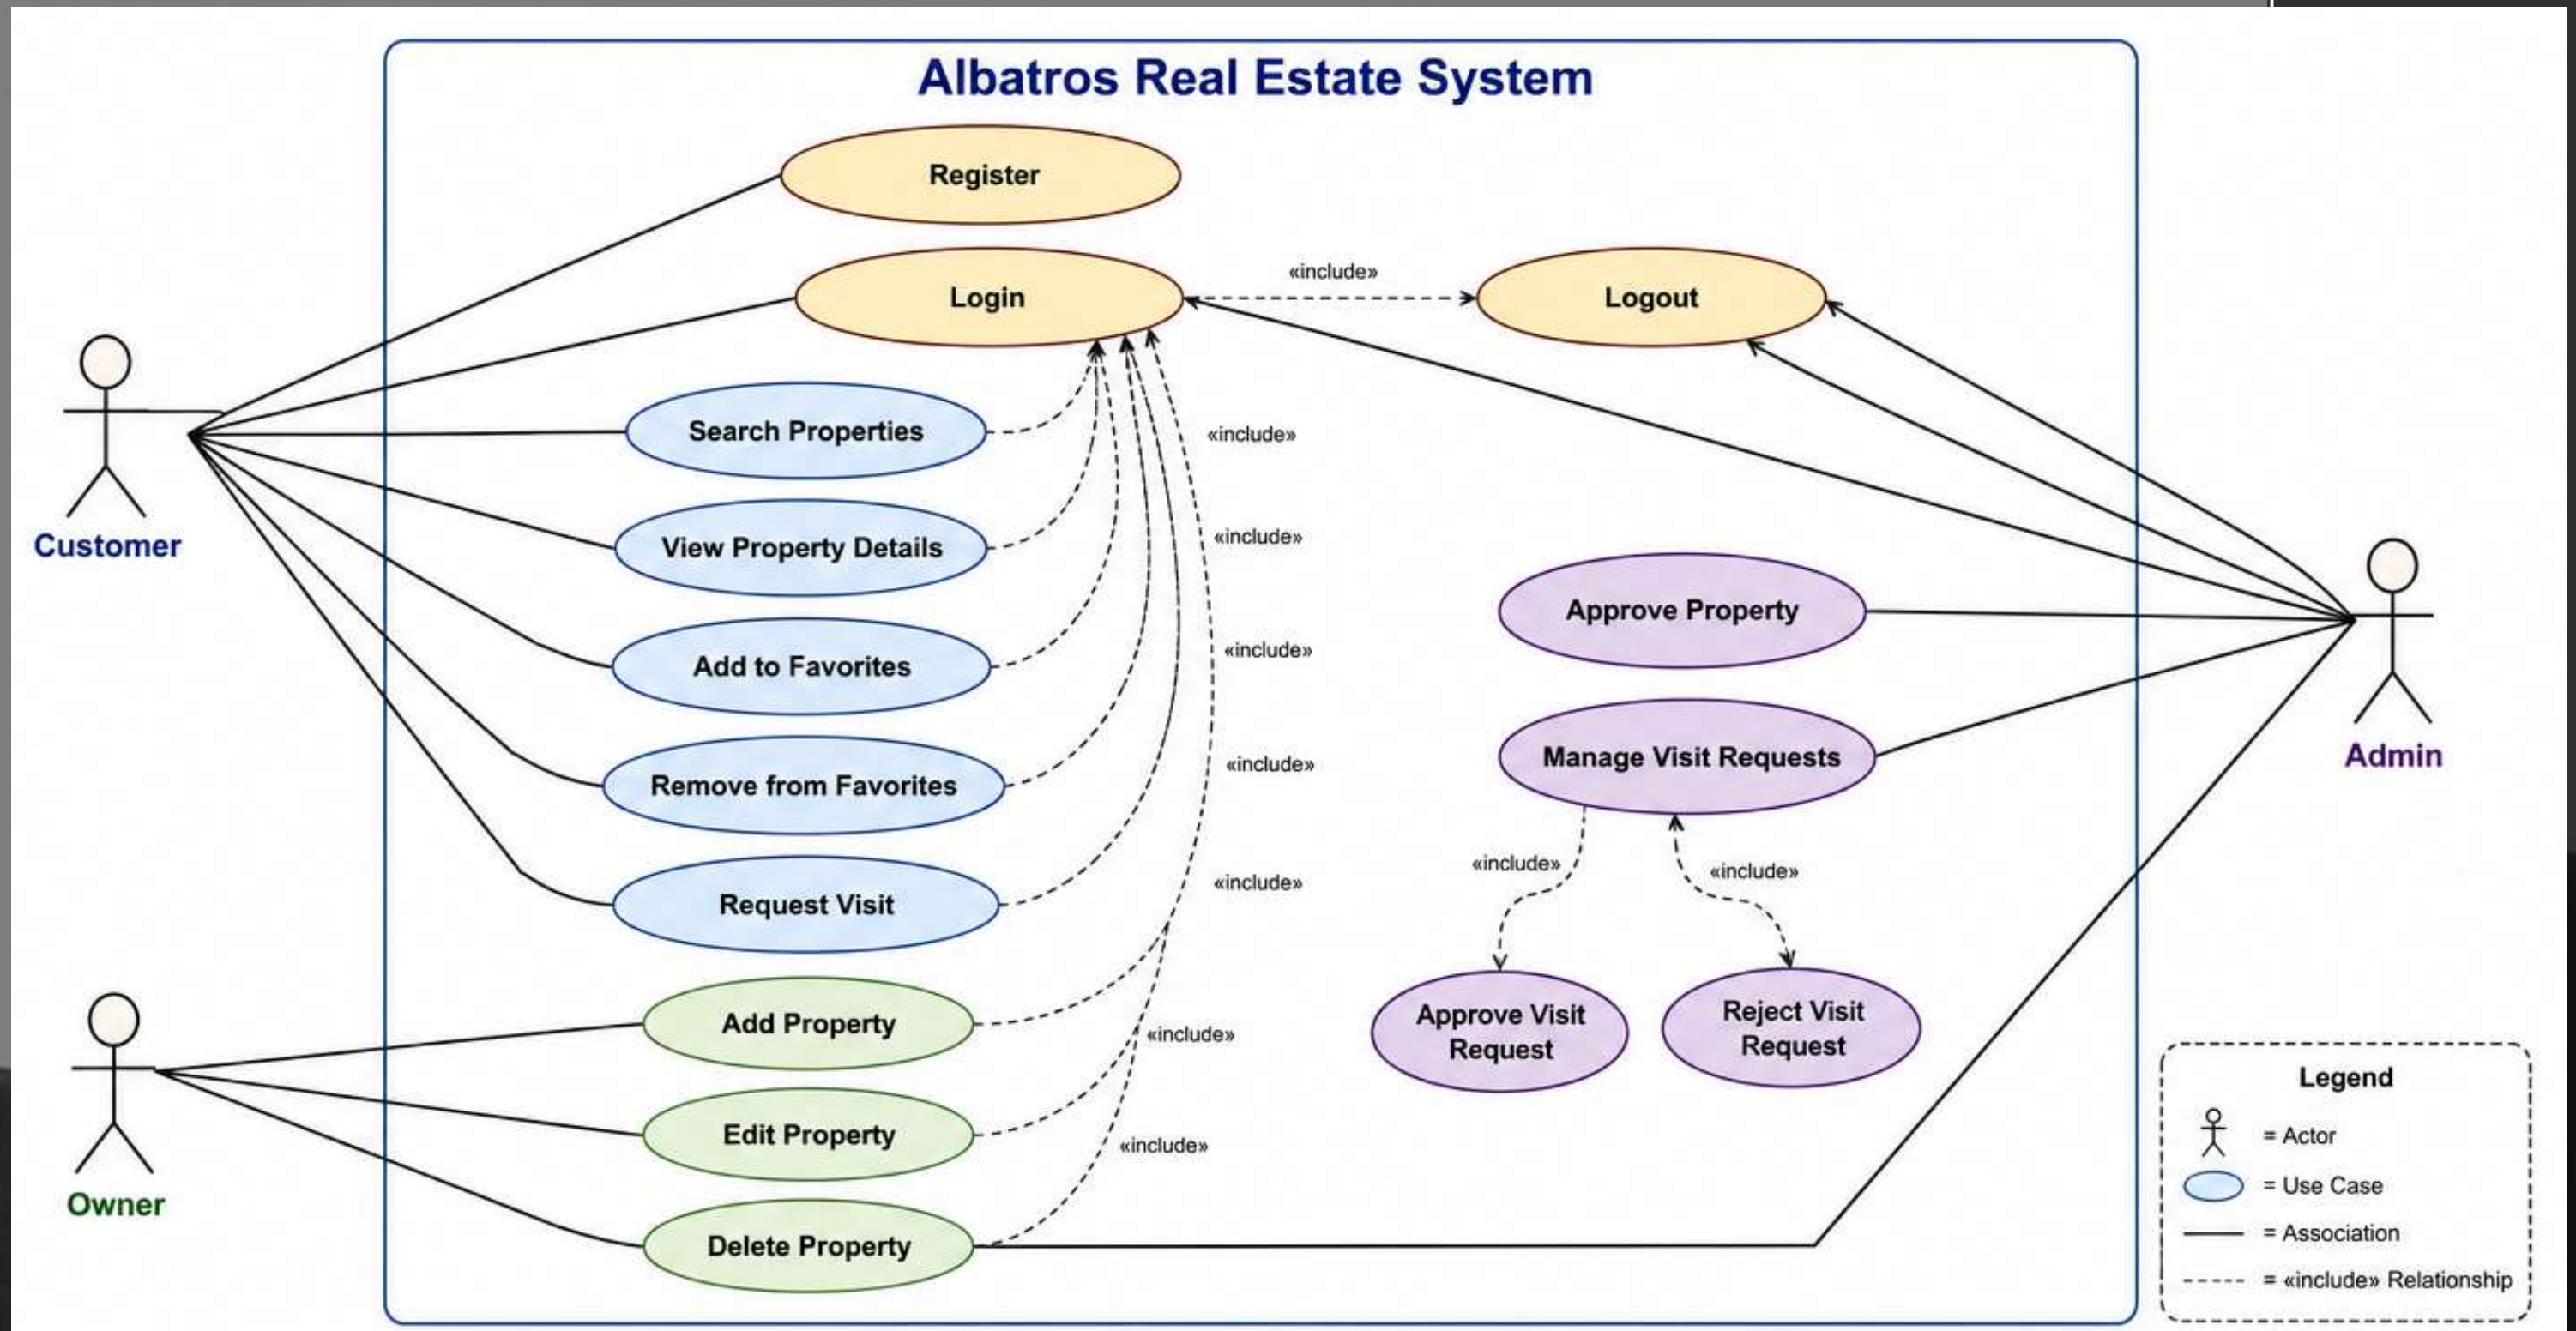

- Simplify property searching.
- Enable efficient property management.
- Secure user authentication.
- Provide a responsive and user-friendly experience.

System Features

 Customer	 Owner	 Admin
Register/Login	Add Property	Approve Properties
Search	Edit Property	Reject Properties
Favorites	Delete Property	Manage Users
Visit Request	Manage Listings	Monitor System

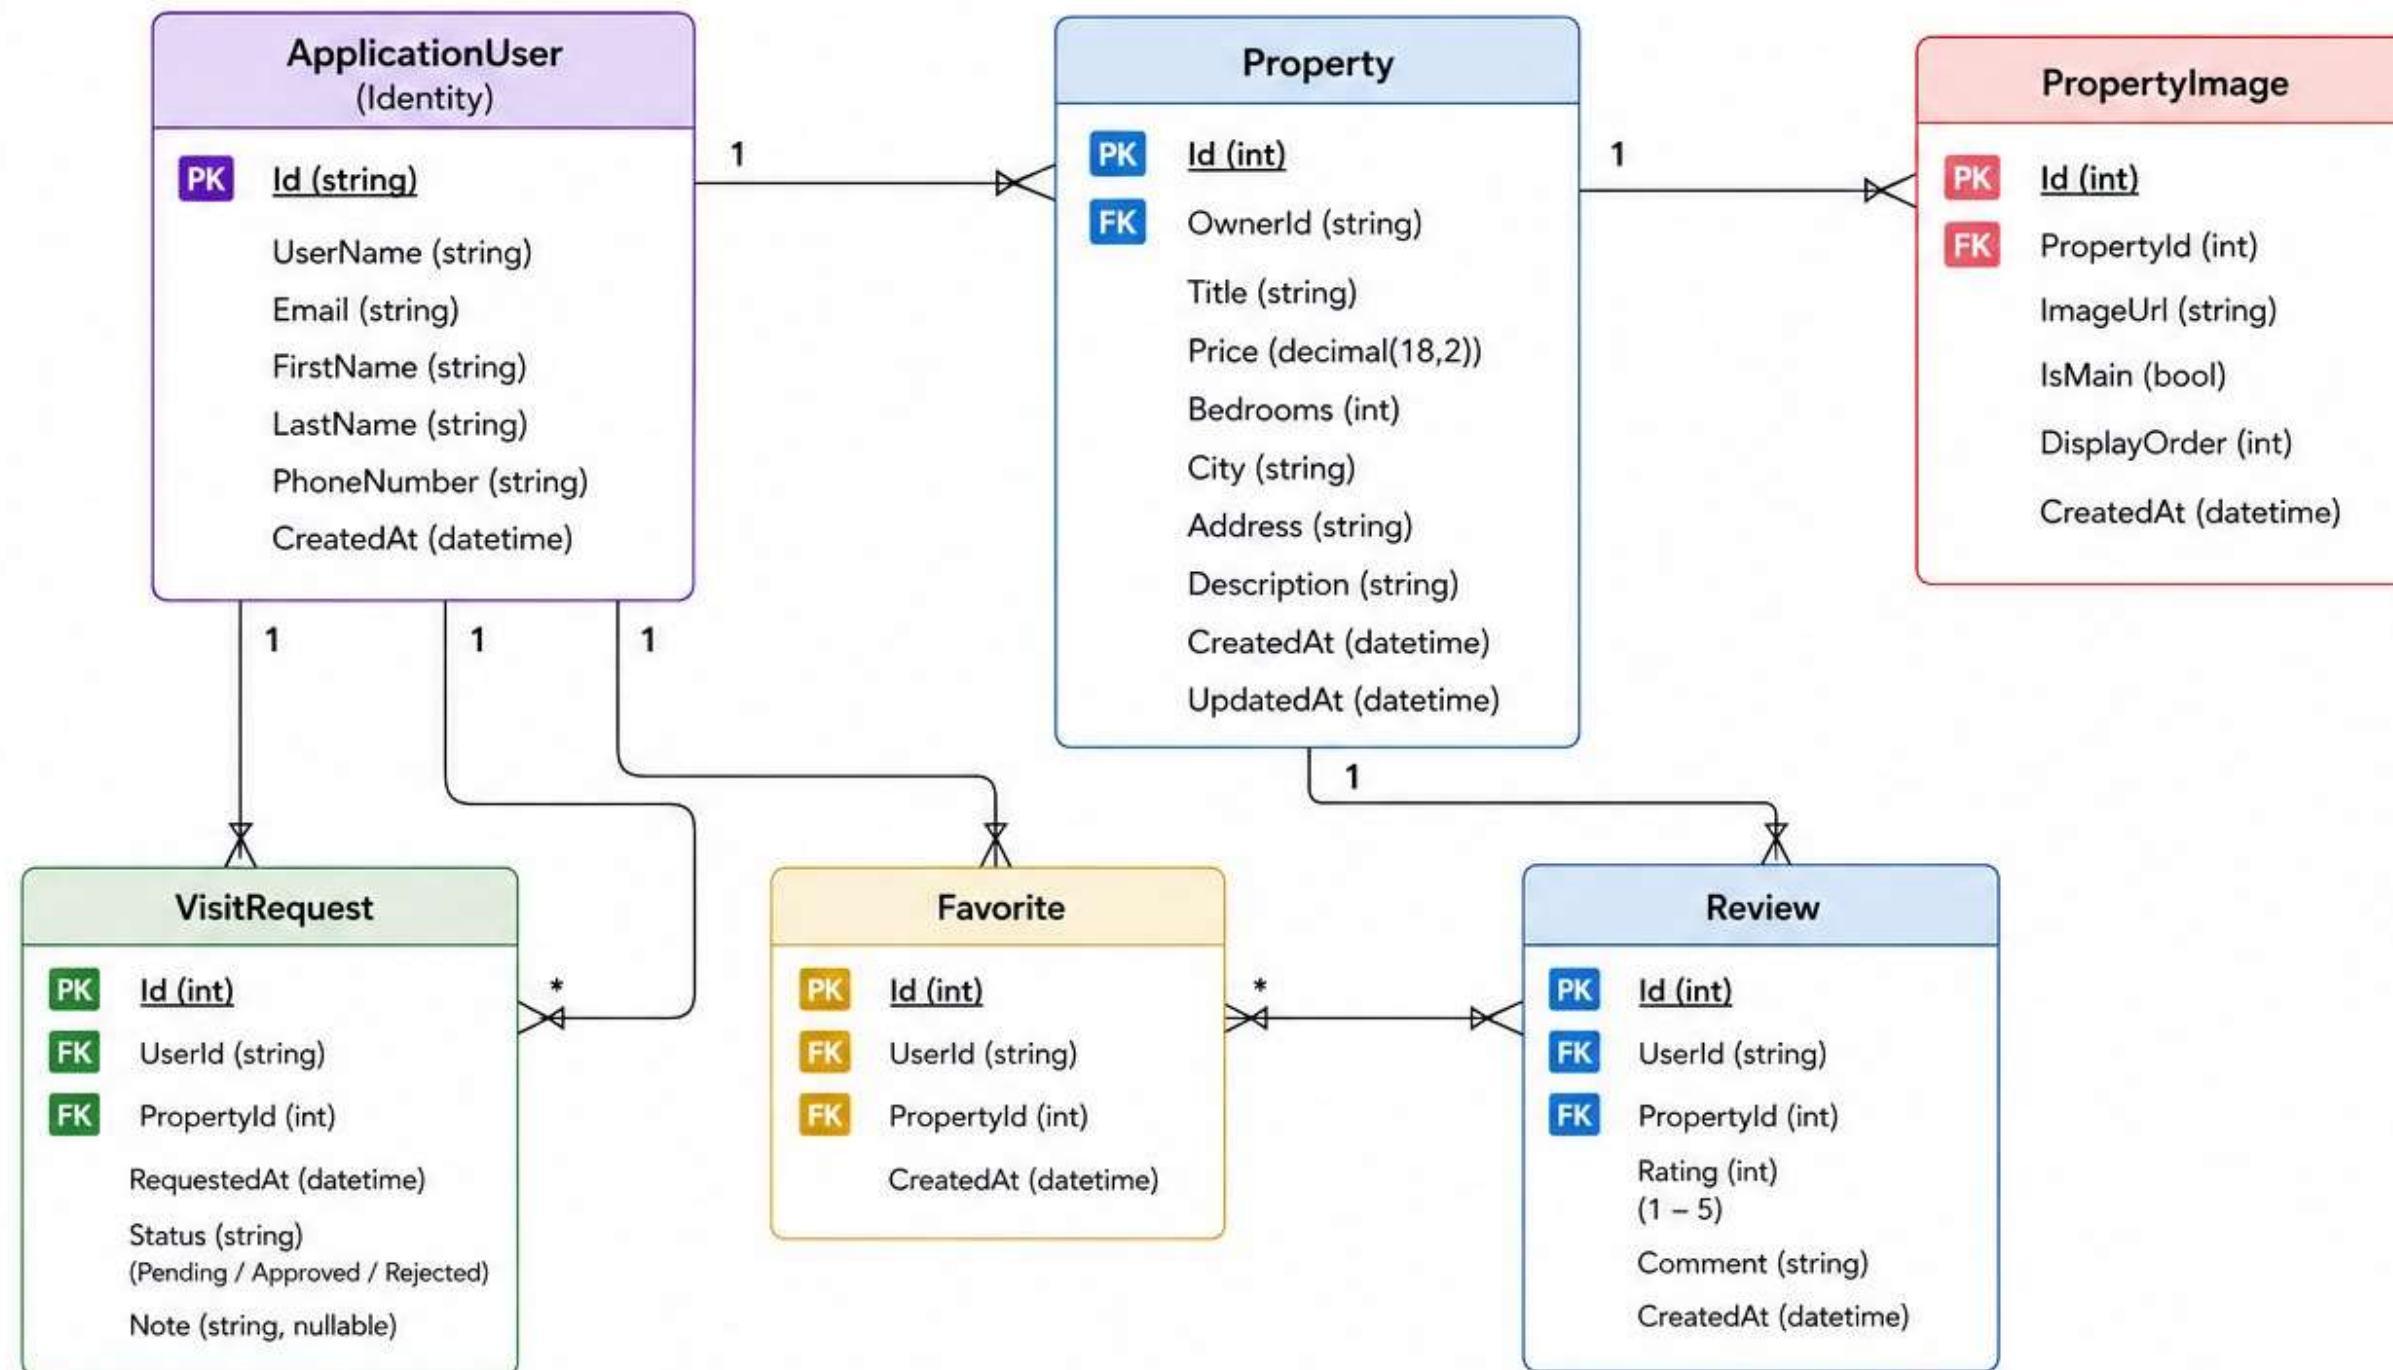

System Workflow

System Design

ERD – Real Estate Web Application

System Design

Technology Stack

Frontend

- HTML5
- CSS3
- JavaScript
- Bootstrap

Backend

- ASP.NET Core
- C#
- Entity Framework Core

Security & Tools

- Git & GitHub
- Visual Studio

Database

- SQL Server

Challenges & Future Enhancement

Challenges

- Implementing JWT Authentication
- Designing the database relationships
- Managing user roles and permissions
- Handling property image uploads

Future Enhancements

- Google Maps Integration
- AI-Based Property Recommendations
- Online Payment
- Mobile Application
- Real-Time Notifications
